Pressotherapy Topical

. Lymph is made up of white blood cells, which are essential for the body's immune system. It also contains much fat and the rest of bacteria and cells. The lymphatic system collects excess fluid and debris from dead cells that accumulate between cells and tissues.

The pressotherapy slimming device uses a non-invasive method of pressure on different areas and local massage of different parts of the body to cause lymphatic drainage. Of course, there is a manual massage method, but this device does it with better quality. Pressure local slimming device stimulates the body's lymphatic system by creating a uniform and controlled pressure and local slimming.

► The effect of pressotherapy topical slimming device on the lymphatic system

The lymphatic system is part of the human circulatory system and is vital for the immune system. The lymphatic system consists of a vast network of lymphatic vessels that are very similar to blood vessels, and there is a fluid called lymph inside these vessels.

It also collects much fat produced by the digestive tract.

► The working mechanism of pressotherapy

The control center in the pressotherapy slimming device, depending on the type of treatment and the program selected by the operator of the device, starts blowing air in different parts of the device (airbags around the patient's body); Repeat this several times during the treatment session to improve blood and lymph circulation.
